Repair Operation #1 Description of Work

Pump service: Drained and changed oil in t-case, lubricated driveline and valve linkages. Checked primer operation - ok. Performed dry vacuum test - failed due to leaks. Found that packing was leaking badly, adjusted pump packing to specs. Packing felt very hard and may need replacing in the near future. Found to be leaking: 2.5" akr p/s aux inlet, 3" akr deck gun valve, 2" akr tank fill (labeled incorrectly), 3" akr tank to pump, 2.5" d/s aux inlet, 2.5" akr disch 1, 2, 3, 4, 2.5" akr rear disch, 2" akr upper speedlay valves. Also found pump transmission cooler line leaking water badly - tightened and tested - ok. Also found that somewhere along the forward end at the top of the booster tank there is a split that will leak water from the tank. The tank will need to be removed at our Forsyth facility for repair. 1.50 hrs were added due to extensive diagnosis time.

Repair Operation #2 Description of Work

Perform NFPA pump test: failed dry vacuum test. Passed pump test.

Repair Operation #3 Description of Work

Truck will not hold water:
